

FIELD SERVICES

VIBRALIGN MAINTENANCE OFFERINGS

VibrAlign, Inc. provides money saving preventive and predictive maintenance services to all types of industry. We are committed to providing quality services to our customers, including:

LASER ALIGNMENT

Laser-based horizontal and vertical shaft to shaft alignment services. Also, Geometric alignment services such as roll parallel, perpendicularity, straightness and flatness measurements.

VIBRATION ANALYSIS

Troubleshooting and resolution of vibration problems on rotating equipment, structures and other components.

TRAINING SERVICES

We provide laser-based shaft alignment, roll alignment, and geometric alignment classes. We also have a curriculum for basic vibration analysis training. Training service can be accomplished in the VibrAlign Training Center at our corporate office or at the customer's facility.

ACCEPTANCE TESTING

Acceptance testing assures that new or rebuilt equipment is in an acceptable operating condition. Vibration analysis, and/or laser alignment are typically utilized to assess the condition of new equipment.

PREDICTIVE MAINTENANCE

Development and support of in-house programs as well as establishing and maintaining condition monitoring programs for your facility.

DYNAMIC BALANCING

Computerized in-place balancing of rotating equipment.

ULTRASONIC INSPECTIONS

Bearing inspection and monitoring services for detection of bearing wear and lubrication problems. Other areas for inspection include: steam traps, rotating equipment, valves and pressure/vacuum leaks.

MACHINERY CONSULTANTS

VibrAlign will assess your facility for preventive/predictive maintenance needs or enhancements. Other services include machinery assessments to allow for optimum condition-based scheduling of maintenance tasks.

VibrAlign, Inc. serves clients nationwide and internationally. VibrAlign utilizes state-of-the-art preventive/predictive maintenance equipment to provide our clients with these cost effective, quality-based services.
