

THE SOONER YOU GET YOUR PEOPLE UP TO SPEED, THE SOONER YOU'LL START SAVING.

VIBRALIGN LASER ALIGNMENT TRAINING

You've already been sold on the savings potential of VibrAlign's laser alignment systems. Saving bearings, shafts and seals. Saving on energy and maintenance costs. Saving your company costly downtime.

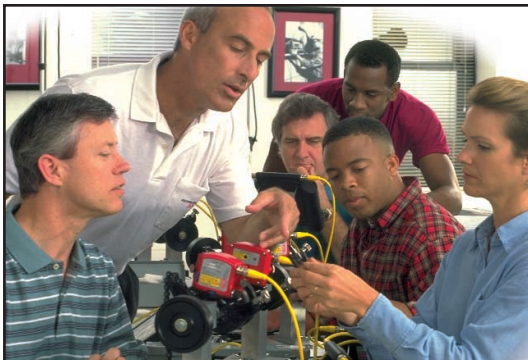

Now there's one more step to maximizing your savings: VibrAlign Training.

So much of the operation of our alignment systems is intuitive, but to really enjoy the benefits immediately and over the long term, training is essential. It's also quick and convenient.

Two days of training at your place or ours.

You could call our training staff the ultimate interactive training manual. Our instructors work side by side with your people to provide quick, correct answers to questions as they come up. No head-scratching, no re-reading the manuals a dozen times, no trial-and-error as they learn.

During two-day training sessions, you will learn quickly through a combination of lessons, demonstrations, actual practice alignments and discussion with instructors. Our instructors have an average of 15 years each of "real world" alignment expertise.

TRAINING COVERS THESE TOPICS:

- Pre-alignment considerations
- Checking run-out
- Correcting gross soft foot
- Measuring, evaluating and correcting misalignment with the clock and tri-point method
- Straightness measurement
- Machine train alignment

"Every single person who attended your training classes gave VibrAlign the highest possible rating. Many said it was the best training session they ever attended."

Mark Clements,
Ford Motor Company Skilled Trades Training Coordinator

TRAINING SERVICES

VIBRALIGN LASER ALIGNMENT TRAINING

Customized training in line with your needs.

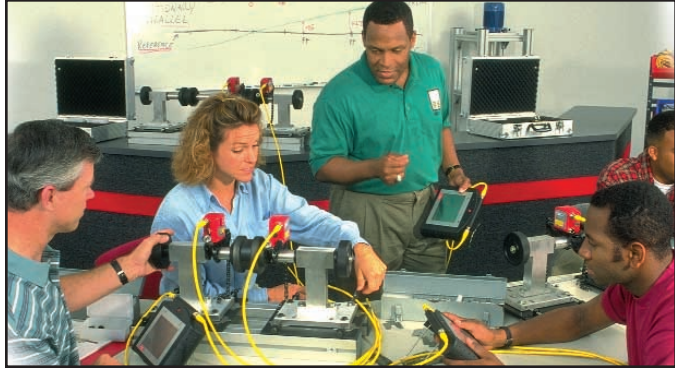

Some of our students come to us with no laser alignment experience. Others know the basics well, but want to understand and practice more advanced procedures. We can customize our training program to a range of needs so no instruction time will be wasted. In addition, VibrAlign instructors can provide instruction on most laser systems – not just our own Fixturlaser systems.

“The second day, we absolutely nailed a motor/gearbox alignment, and we could hear and feel the difference when we started the machine.”

Jim Van Horn,
USPS Bulk Mail Center alignment trainee

For more information on our training program, call toll-free, **800.394.3279** or look us up at **www.vibralign.com** on the Internet. The sooner you contact us, the sooner we can get your training session scheduled.

SPECIAL ADVANTAGES OF VIBRALIGN'S TRAINING PROGRAM:

- Classes limited to nine students per session
- Training at your site or at our training facility
- For every three students, we provide an alignment simulator and a laser alignment system
- Hands-on classes covering everything from alignment fundamentals to roll parallel
- Classes taught by certified professional instructors with on-the-job experience
- Workbook and user's manual for each student
- Certificate of Accomplishment for your newly trained alignment experts
